

Pharmacy Management (ePrescribe) in OneView

When ePrescribing in OneView, pharmacies are patient-specific and are selected during the ePrescribe workflow. Prescriptions are initiated in the patient's chart anywhere you see the +ADD RX option (ESRD/AKI Mgmt or Clinical Summary sections). The workflow for selecting the pharmacy will vary depending on whether or not you have previously ePrescribed medications for the patient through OneView.

Reminder: After the prescription is created, it must be reviewed, signed, and action must be selected to transmit to the pharmacy.
